AMBIENCE IN MOTION

Exhaust Fans and Bathroom Heaters

evolt

atom air

Ambience
in motion

Bring a peaceful ambience to your bathroom, laundry, or ensuite with the Atom Air range of **exhaust fans** and **bathroom heaters**.

These **stylish** powerhouses deliver **efficient** extraction, making sure it's hot air and not energy bills going through the roof.

Warranty

Buy with confidence, knowing you are covered by Atom's comprehensive warranty.

We provide a leading **3-year** replacement warranty on the entire range of Atom Air **exhaust fans**.

For homeowners, bathroom heaters have a **3-year in-home warranty** to cover an electrician in the event of a product fault.

atom·air

Choosing an exhaust fan

Without proper ventilation, moisture and mould can build up, leading to extra cleaning, maintenance, and potential long-term health problems. Unchecked, this can cause structural damage to the property.

Size matters

Choosing a fan with sufficient airflow is crucial to handle the steam in your bathroom. Calculate the room's volume (height x width x length) and consider the number of air changes per hour required.

We recommend 10 air changes per hour for an ensuite or laundry, and 15 for a full bathroom with a shower.

We have done the hard work for you, please refer to the Area suitability (m²) figures on page 52.

Adequate ventilation

For the exhaust fan to function effectively, an equal volume of replacement air must be able to enter the room; the fan will not function efficiently in an airtight room.

This is generally via on open window, vent or drawn under the door. Choose an exhaust fan that has a draught stopper and ensure that the ducting is properly sealed to prevent air from leaking back into the bathroom.

Location, location, location

For best results in removing moisture, the exhaust fan should be positioned as close as possible to the source of the moisture and away from any source of replacement air. Placing the exhaust away from doors or windows creates cross-ventilation, ensuring that it can effectively service the entire room.

For best results, we do not recommend placing exhaust fans and bathroom heaters directly above shower recesses. Please refer to AS/NZS 3000 in relation to individual models for further information on wet zone requirements when locating exhausts or bathroom heaters close to, or above showers and other wet zones.

Ducting

Building regulations require exhaust fans to be ducted outside, not into a ceiling or wall cavity. Keep duct runs short and straight for optimal performance. Excessive bends reduce efficiency.

Other factors to consider

There are several factors that might suggest you require a more powerful exhaust fan.

- High ceilings require more powerful fans due to the larger air volume and distance from the moisture source.
- Open showers disperse more steam, needing a stronger fan.
- High humidity levels can increase the amount of moisture in the air and slow down air movement, further hindering the efficiency of the exhaust fan.

Exhaust fans

Exhaust fans are integral in bathrooms and ensuites for removing moisture and smells, maintaining a pleasant environment.

Powered by **energy-efficient** motors, most Atom Air exhausts are supplied with a flex and plug for **easy installation**, though some models require hardwiring.

HEATSPOT

Enjoy the warmth and comfort of the Heatspot, a single heat lamp for ensuites and small bathrooms. This compact unit provides powerful, instant body warmth, with a durable design and matte white finish.

Product features

· Infrared heat lamp provides instant heat
· Perfect for ensuites and small bathrooms
· Steel housing ensures durability and longevity
· Easy to control and operate
· Matte white finish - Blends well with any bathroom décor

TIMER

The Run-On Timer keeps your bathroom free of steam and odours after you leave. This fully adjustable timer fits most exhaust fans and integrates easily behind existing switch plates.

Product features

· Allows you to set the exhaust fan to run for 1–25 minutes after leaving the room.
· Fits within a wall-mounted switch plate or exhaust fan
· Easy mount design with moulded fastening hole
· Works with most exhaust fans on the market
· Continues to eliminate steam and odours after you exit the bathroom

NCC Building Code Update

The National Construction Code (NCC) 10.8.2 has been updated to improve ventilation standards in residential buildings. These changes ensure better air quality and moisture control in bathrooms and sanitary compartments. Here are the key points:

1. Minimum Flow Rates:

Bathrooms and sanitary compartments require a minimum flow rate of 25 L/s.

Kitchens or laundries require a minimum flow rate of 40 L/s.

2. Direct Discharge:

Exhaust systems in bathrooms and sanitary compartments must discharge air directly to the outside or via a duct.

3. Run-On Timer Requirement:

For exhaust systems not run continuously, serving bathrooms or sanitary compartments without natural ventilation, the system must:

·   Be interlocked with the room's light switch.

·   Include a run-on timer to continue operation for 10 minutes after the light is turned off.

4. Make-Up Air:

Rooms with exhaust systems must have make-up air openings to an adjacent room or in accordance with AS 1668.2, ensuring proper air balance.

Atom Air is at the forefront of addressing these changes. Our new **Azzure** exhaust fan with an integrated run-on timer ensures compliance with the updated NCC requirements, providing continuous ventilation to eliminate steam and odours. Additionally, our **Run-On Timer accessory** is compatible with most AC exhaust fans, allowing easy upgrades for existing systems.

By incorporating these innovative solutions, Atom Air continues to set the standard in ventilation technology, ensuring optimal air quality and moisture control in modern homes.

atom air

Frequently Asked Questions

Where is the best position to install the bathroom heater?

It depends on the bathroom model, if the heater uses IR technology then this will provide instant radiant heat directly below the unit. If the heater uses energy-efficient PTC heater technology, then it will heat the entire room with gentle, warm air. We advise giving time to warm up with PTC heaters.

Where is the best position to install the exhaust fan?

The exhaust fan is best positioned as close as possible to the shower and away from windows or doors to create cross-ventilation. It is important to size the exhaust fan to the size of your bathroom. Refer to our handy sizes on page 52.

Can I operate the heat lamps without the exhaust fan?

Yes, you can operate the exhaust fan without using the heat lamps, via the gang switch. Please refer to individual product models for specific operation.

Why is the exhaust fan not clearing all of the steam from my bathroom?

This depends on the conditions (colder climates may require much higher extraction of air rates) and cross-ventilation set-up.

### Can I have the switch plate installed horizontally?

Yes, our switch mechanisms are supplied separately so that the installing electrician can install the switch plate horizontally or vertically.

Can I use another switch plate to match the rest of my house?

Yes, the installing electrician can use a different switch plate as long as it is mains-rated.
